Course Description:

COURSE DESCRIPTION

We investigate to take lesson learned, implement preventive measures, and to prevent recurrence of adverse events. Investigating an adverse event is like peeling an onion. We start with the direct causes that are the most visible. To get to the bottom of the events, we must uncover "layer upon layer" to discover the causes behind. Technological development and new organizational structures lead to an increase in complexity, and it becomes more difficult to understand the connection between an incident and the underlying causes of an incident. This course presents method, organisation, and process for conducting investigations. The course can also be offered in combination with a classroom session.

COURSE CONTENTS

- Description and classification of adverse events
- Organising an investigation
- Handling information and evidence
- The loss-causation model
- The MTO model
- The STEP model
- Reporting and follow-up

HOW WILL THIS COURSE BENEFIT ME, AND MY COMPANY?
